Survey: Global clinical operations need to unify clinical applications

There is an industry-wide drive toward a unified clinical operating model, according to the Veeva 2017 Unified Clinical Operations Survey, one of the industry's largest annual surveys of clinical operations professionals. The new research from Veeva Systems reveals that nearly all respondents cite the need to unify their clinical applications, including EDC, CTMS and eTMF.

Publication bias and clinical trial outcomes reporting

Last month, the world's leading funders of medical research and international non-governmental organizations agreed to set forth new standards that will require all clinical trials they fund or support to be registered, and the results disclosed publicly within mandatory timeframes. The aim is to dramatically improve both the quality of therapies available to patients, as well as the quality of research that leads to new breakthrough.

Rising demand for CRAs

Demand for Clinical Research Associates (CRAs), professionals whose main function is to monitor clinical trials, is expected to grow 1.52% annually by 2018, which results in many sponsors and CROs finding themselves in a never-ending recruitment cycle for qualified CRAs. One of the biggest factors contributing to the global shortage of experienced CRAs is the lack of training opportunities for clinical professionals to begin their careers as CRAs.
